VAAL UNIVERSITY OF TECHNOLOGY

Inspiring thought. Shaping talent.

FACULTY OF APPLIED AND COMPUTER SCIENCE

Department: Computer Sciences

Diploma : Information Technology

Subject : Web Development 3.2

Internal Subject code : AIWEY3A

Assessment Type : Assignment

Due date: : 16th October 2026

Subject: Web Development 3.2

Examiner: Mr. N. Leduma

Moderator: Mr. X.Piyose

Instructions: -

All VUT Examination Rules and Regulations for CASS Apply.

Academic Project Brief: Web Development 3.2 Final Assignment

Project Title: Developing a Functional and Compliant Website

1. Assignment Overview:

This assignment serves as the culminating project for Web Development 3.2. Students are tasked with creating a fully functional and compliant website. Building upon the knowledge acquired in Web Development 3.1 and 3.2, students will apply industry standard web design techniques and technologies to deliver a professional website. This project emphasizes the practical application of web-based design techniques and challenges students to employ their skills in designing, planning, creating, and delivering a functional website.

2. Project Objectives:

In this project, students should:

- Apply current and appropriate technological standards of HTML, CSS,PHP and JavaScript for designing and implementing a fully functional website.
- Utilize industry-standard file naming conventions and formats for uploading and delivering web-based content.

  Demonstrate proficiency in Website editing applications and FTP applications for testing and editing web-based content.
- Create a functionally aesthetic user interface by applying user experience principles.

3. Final Website Requirements:

a) Website Pages:

Design the following pages: Home page, About page, Contact page.

All pages must include a clickable logo leading to the home page, a navigation bar with defined hover states, and a footer displaying business name, address, phone number, social media links, and copyright information.

b) Design and Structure:

- Implement an overall design structure that matches the website architecture outlined in your documentation. Every general element and designs are correctly displayed
- Consistency, that is corresponding elements have consistent and coherent aspect that has a clear Style Guide for the webpage
- Simplicity, that is the design is appealing, accessible and easy to understand
- Layout, that is the website has a very attractive and usable layout
- Ensure the website contains all pages from the sitemap, demonstrating the complexity and depth of a fully functional website.
- Design an engaging interface with proper content hierarchy, including header and text sizes, primary and secondary images, maintaining a balanced layout.
- Incorporate appropriate image formats and media types adhering to industry standards.

- Apply typographic hierarchy, including the use of the <h1> tag and fonts from the brand style guide.
- Implement industry-standard naming conventions for web pages and photos, employing file management techniques for the website's root folder.

c) Functionality

- Responsive, that is the website has been developed as a responsive webpage in a correct and attractive way
- Navigation that is, design navigational elements using brand guide colours, fonts, and background colours, while removing text decoration. Ensure all web pages are linked using standard navigation tools, providing a cohesive user experience.
- All elements are usable, and their functionalities are correct and accessible
- External links, the website contains an adequate number of external links related to the subject and they are active and functioning

d) Content

- Relevance Relation with the subject -The information is related to the subject assigned for the project
- Organization -Organization Information is complete, interesting, correct and relevant
- Visual elements -The website contains adequate visual elements that contribute making the webpage attractive and interesting

Homepage:

Develop a compliant homepage using industry-standard editors and clean code. Include a logo, navigation bar, a dominant image, the <h1> tag, secondary content, and a footer.

Navigation:

Readers can get around the website by means of a menu

4. Evaluation Criteria:

- Adherence to industry-standard web design techniques and technologies.
  Correct implementation of HTML, CSS, PHP and Java Scripts standards.
- Proper usage of file naming conventions and formats.
- Effective utilization of Website editing applications and FTP applications.
  Creation of a visually appealing and user-friendly interface.
- Correct implementation of navigational elements and layout as per the brand style guide.

5. Important Note:

Mastery of the industry-standard techniques learned and applied in this assignment is transferable to web and application design for years to come. These skills enable limitless possibilities in web design once mastered.

6. Deadline and Submission Guidelines:

Submission Deadline: 16th October 2026

Submission Format: Students are required to submit the website files along with a brief project report detailing the design and development process, challenges faced, and solutions implemented.

VERY IMPORTANT: This assignment challenges students to apply their acquired knowledge in a practical context, fostering creativity and technical expertise in web development. Best of luck with your project!

Web Development 3.2 Final Assignment Rubric

Criteria Description Score (1-4)

Attributes	Criteria	Scale of Score				
	(Optional)	1.Not acceptable	2.Below expectations	3.Meets expectations	4.Exceeds expectations	
General disposition	Correct	There are elements that cannot be seen	Some elements cannot be seen when the window size changes	Every element is correctly displayed	The overall design is correct and accessible	5%
Consistency	Consistent and coherent	Different presentations for analogous elements make the webpage difficult to understand	There are unnecessary differences in analogous elements	Analogous elements have coherent aspect	There is a clear Style Guide for the webpage	5%

Typography	Clear and coherent	The size, font or style of the text makes part of it unreadable	The size, font or style of the text makes part of it hard to read or is incoherent	The typography is coherent, simple and clear	The typography scheme is well chosen, accessible and pleasant	5%
Simplicity	Simple and efficient	The web page is too busy and it is difficult to find the elements and the information	The web page is somewhat busy and some elements or information cannot be found easily	The different elements are included appropriately	Design is appealing, accessible and easy to understand	5%
Layout	Attractive and usable	The website has an unattractive layout	The website has a very simple layout, without changing the position of elements	The website has an attractive and usable layout	The website has a very attractive and usable layout	5%
Total score						25%

HTMLT and CSS

Attributes	Criteria	Scale of Score				Score
	(Optional)	1.Not acceptable	2.Below expectations	3.Meets expectations	4. Exceeds expectations	
Images and videos		Images and videos are not included in the website	A few images and no videos are included in the website	Some images and a video are included in the website	Several images and several videos are included in the website	5%
Tables and lists		Tables and lists are not included in the website when needed or are misused	Lists and/or tables are underused in the website	Lists and tables are included in the website for the correct purpose	A smart use of list and tables improves the display and function of the webpage	5%
Headings and span		Headings and span are not included in the website when needed	Only headings but potentially useful span elements are not included in the website	Headings and span elements are adequately included in the website	A smart use of headings and span elements improves the display and functionality	5%

Other HTML tags		Some necessary HTML tags are not included in the website	At least one useful additional HTML tag is included in the website	At least two useful additional HTML tags are included in the website	At least three useful additional HTML tags are included in the website	5%
Total score						20%

Content

Attributes	**Criteria**	**Scale of Score**				**Score**
	(Optional)	1.Not acceptable	2.Below expectations	3.Meets expectations	4. Exceeds expectations	
Relation with the subject	Related with the subject	The information is not related to the subject assigned for the project	The information is partially related to the subject assigned for the project	Most of the information is related to the subject assigned for the project	The information is related to the subject assigned for the project	5%

Relevance	Interesting and relevant	Information is incomplete, ambiguous or irrelevant	Information is somewhat vague or partially incomplete	Information is fairly complete, interesting and correct	Information is complete, interesting, correct and relevant	5%
Organization	Well organized	The lack of organization of the text makes it difficult to follow	The text is somewhat disorganized, and this affects the readability of the webpage	The text is correctly organized	The good organization of the text helps understanding the content	5%
Visual elements	Appropriate and related with the subject	Only text is included, and visual elements are lacking	Some visual elements such as images, videos or tables related to the subject are included	Adequate and clarifying visual elements such as images, videos or tables are included in the website	The website contains adequate visual elements that contribute making the webpage attractive and interesting	5%
Total score						20%

Functionality

Attributes	Criteria	Scale of Score				Score
	(Optional)	1.Not acceptable	2.Below expectations	3.Meets expectations	4. Exceeds expectations	
Clarity of functionality	Usable	There are elements that cannot be used or have wrong behaviour	The behaviour of some elements is hard to understand or use	All elements are usable, and their function is clear and correct	The functionality is clearly expressed in an accessible way (or several if necessary)	5%
Navigation	Intuitive and easy	The website is difficult to navigate	The website is somehow difficult to navigate or not intuitive	Readers can get around the website by means of a menu	The website contains a dropdown menu and is easy and intuitive to navigate	5%
External links	Active and functioning	The website does not contain any external links or they are broken	The website contains few external links or some of them are broken	The website contains an adequate amount of external links related to the subject and they are	The website contains plenty of useful external links related to the subject and they are active and functioning	5%

				active and functioning		
Total score						15%

Contrasts

Attributes	Criteria	Scale of Score				Score
	(Optional)	1.Not acceptable	2.Below expectations	3.Meets expectations	4. Exceeds expectations	

Readability of the content	Readable	There are characters or words that cannot be read	The text disposition or its combination with other elements makes the text hard to read	All the text in the page is correctly readable	The text is clear, nice to read and accessible	5%
Colour scheme	Clear and coherent	The colour scheme makes the webpage unreadable	Some colours make some elements hard to read	The color scheme is clear and simple enough	The color scheme is well chosen, coherent and help clarity of the page	5%
Total score						10%

Other elements

Attributes	Criteria	Scale of Score				Score
	(Optional)	1.Not aceptable	2.Below expectations	3.Meets expectations	4. Exceeds expectations	

Responsive		The website is not responsive	The website includes some elementary responsive behaviour	The website includes some responsive behaviour	The website has been designed as a responsive webpage in a correct and attractive way	5%
Languages		The website is created only in one language	The website is created in two languages but spelling or grammar errors are included	The website is created in two languages and no remarkable spelling or grammar errors are present	The website is correctly created in two languages	5%
JavaScript		The website does not contain JavaScript functionality	The website contains at least one useful JavaScript functionality	The website contains at least two useful JavaScript functionalities	The website contains at least three useful JavaScript functionalities	5%
Other resources		No additional resources are	At least one useful additional resource is	At least two useful additional resources	At least three useful additional resource	5%

		included in the website	included in the website	are included in the website	are included in the website	
Total score						20%

Scoring Guide:

4 (Excellent): Exceptional mastery of the criteria. Demonstrates superior understanding and implementation.

3 (Proficient): Proficiently meets the criteria. Demonstrates a strong understanding and effective application.

2 (Basic): Basic proficiency in meeting the criteria. Demonstrates a basic understanding with room for improvement.

1 (Needs Improvement): Limited proficiency in meeting the criteria. Demonstrates minimal understanding and significant improvement is needed.

Note: The total score obtained by the student will be calculated out of 100 points based on the rubric. This rubric provides clear guidelines for evaluating the student's performance in the Web Development 3.2 Final Assignment.
