VAAL UNIVERSITY OF TECHNOLOGY

Inspiring thought. Shaping talent.

FACULTY OF APPLIED AND COMPUTER SCIENCE

Department: Computer Sciences

Diploma : Information Technology

Subject : Web Development 3.2

Internal Subject code : AIWEY3A

Assessment Type : Assignment

Due date: : 16th October 2026

Subject: Web Development 3.2

Examiner: Mr. N. Leduma

Moderator: Mr. X.Piyose

Instructions: -

All VUT Examination Rules and Regulations for CASS Apply.

Report

Student Number	Initial & Surname
224477722	RP Lesetsha
221359427	N Matla
223247820	V Tlhavani
225135485	N Mathe
223385921	MZJ Netshiombo
224093762	PS Ramathuthu

1. Introduction

For our project, we developed a website for a bakery called Golden Bakery. The Golden Bakery project involves designing and developing a website to introduce the bakery, share its story, and communicate its values to customers. The bakery was established in 2024 with a focus on producing quality Bread, Scones and Cake using simple ingredients, traditional sourdough methods, and locally. The goal was to create a warm, inviting online presence that reflects a real bakery.

2. Design

We planned five pages Home, About, Menu, Gallery and Contact. They all share the same header, navigation and footer so the site feels like one thing. The Menu page is split into Breads, Cakes and Scones, and the dropdown in the navigation jumps to each section.

On the home page we wanted people to know what the shop is about straight away. It opens with a big photo of fresh loaves, the line “Bread that was dough this morning” and a button to the menu. Below that are three featured items with prices, the opening hours and a customer quote. We kept the writing short and the way a real bakery would say it.

We also added Sepedi option because a lot of customers in the area speak it. We used HTML, CSS and JavaScript for the mobile menu and language option.

3. Challenges Faced

Several challenges were considered during the design and development process. One challenge was presenting information clearly without making the website look crowded. Another challenge was choosing a suitable design that reflected the bakery’s identity. We also faced the challenges of making the navigation work on both desktop and mobile devices, adjusting images to fit properly, and keeping all five pages consistent.

4. Solutions Implemented

The first challenge was addressed by using headings, short paragraphs, and bullet points. Secondly a simple layout and warm bakery-themed presentation were used to create a professional appearance. We also addressed these issues by adjusting the layout, resizing images where

necessary, using a shared stylesheet, and checking that the links worked correctly after publishing the website on GitHub Pages.

5. Conclusion

The completed site lets a customer quickly see what's on offer, what it costs, when the shop is open and how to get in touch.
